

## JET

Sizes: S, M, L (10" frame), XL (12" frame)

The JET knee brace is designed with children in mind. The shorter frame fits proportionally to a child's leg length and the hinge has been reduced to match the anatomy of the smaller knee. The aircraft aluminum frame provides support, strength and durability, while still remaining lightweight. Brace migration is prevented by contouring and capturing the medial condyle as well as using supracondylar suspension to keep the brace in place. Spacer designed padding allows the brace to be adjusted to the growing child for longer use. By removing or stacking the spacers, a three-point load system can also be created, allowing the brace to be used for Juvenile Osteochondritis Dissecans (JOCD).

### Common Examples of Use

- Ligamentous injuries to the ACL, PCL, MCL and LCL
- Meniscus
- Juvenile Osteochondritis Dissecans

### Product Features

- 10" (25 cm) and 12" (30 cm) length frames
- Reduced hinge size
- Condylar suspension points
- Spacer pads for size adjustments and unloading option

Categories: ACL and PCL Knee Braces, Knee Brace.
